

Setting up Sign-In with Microsoft Authenticator

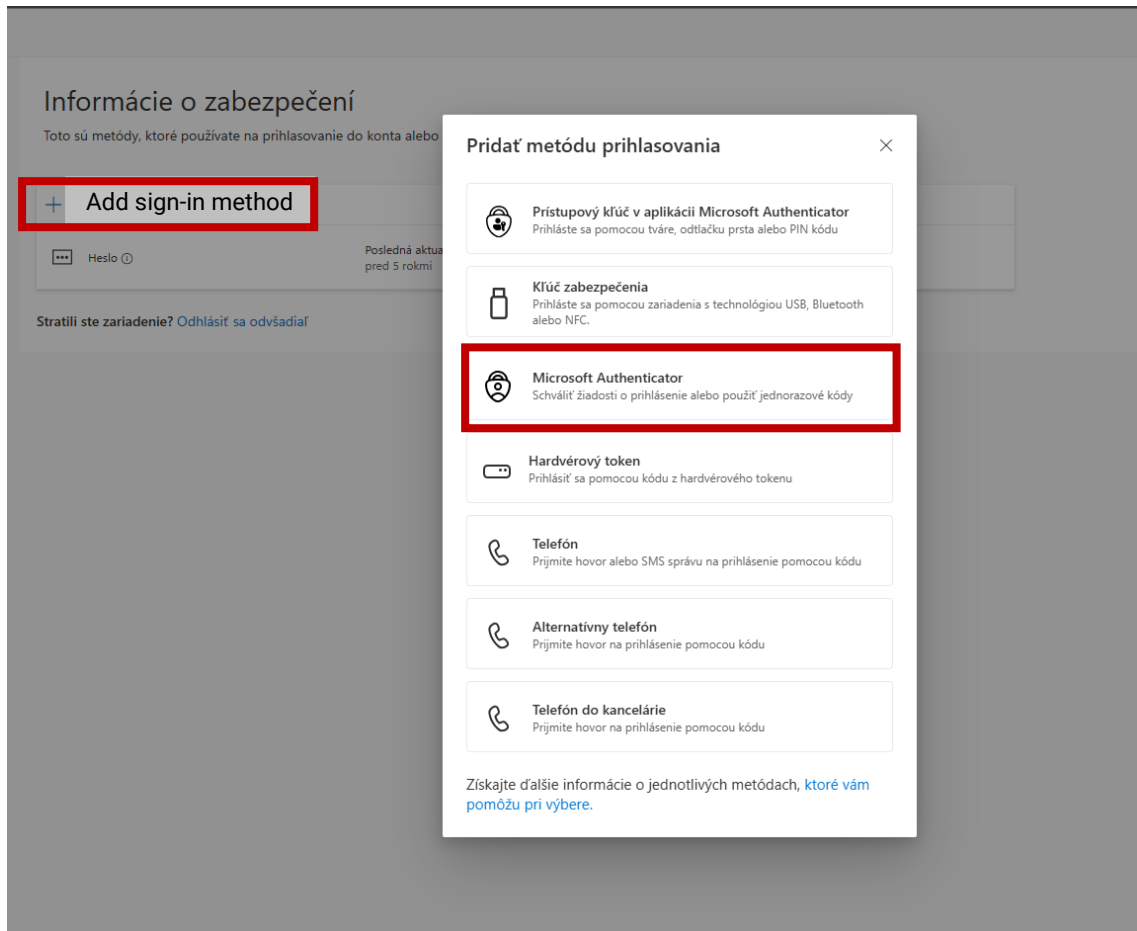

1. Open your **email mailbox in a web browser** – [you can sign in by clicking here.](#)
Use **your university login and password** to sign in.
2. After signing in, click the **icon with your initials in the top-right corner** and select **“View account.”**

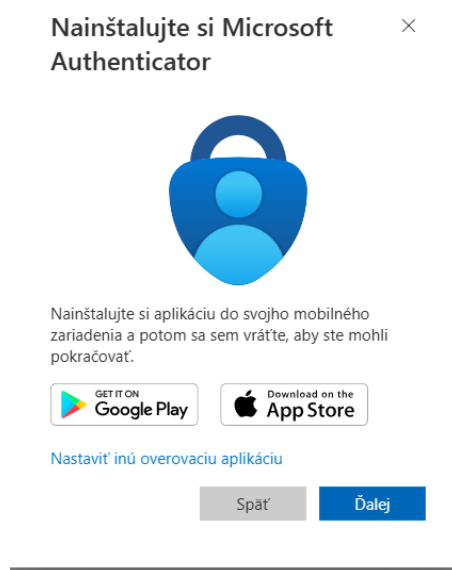

3. A new page will open. In the **left menu**, click **“Security Info.”**

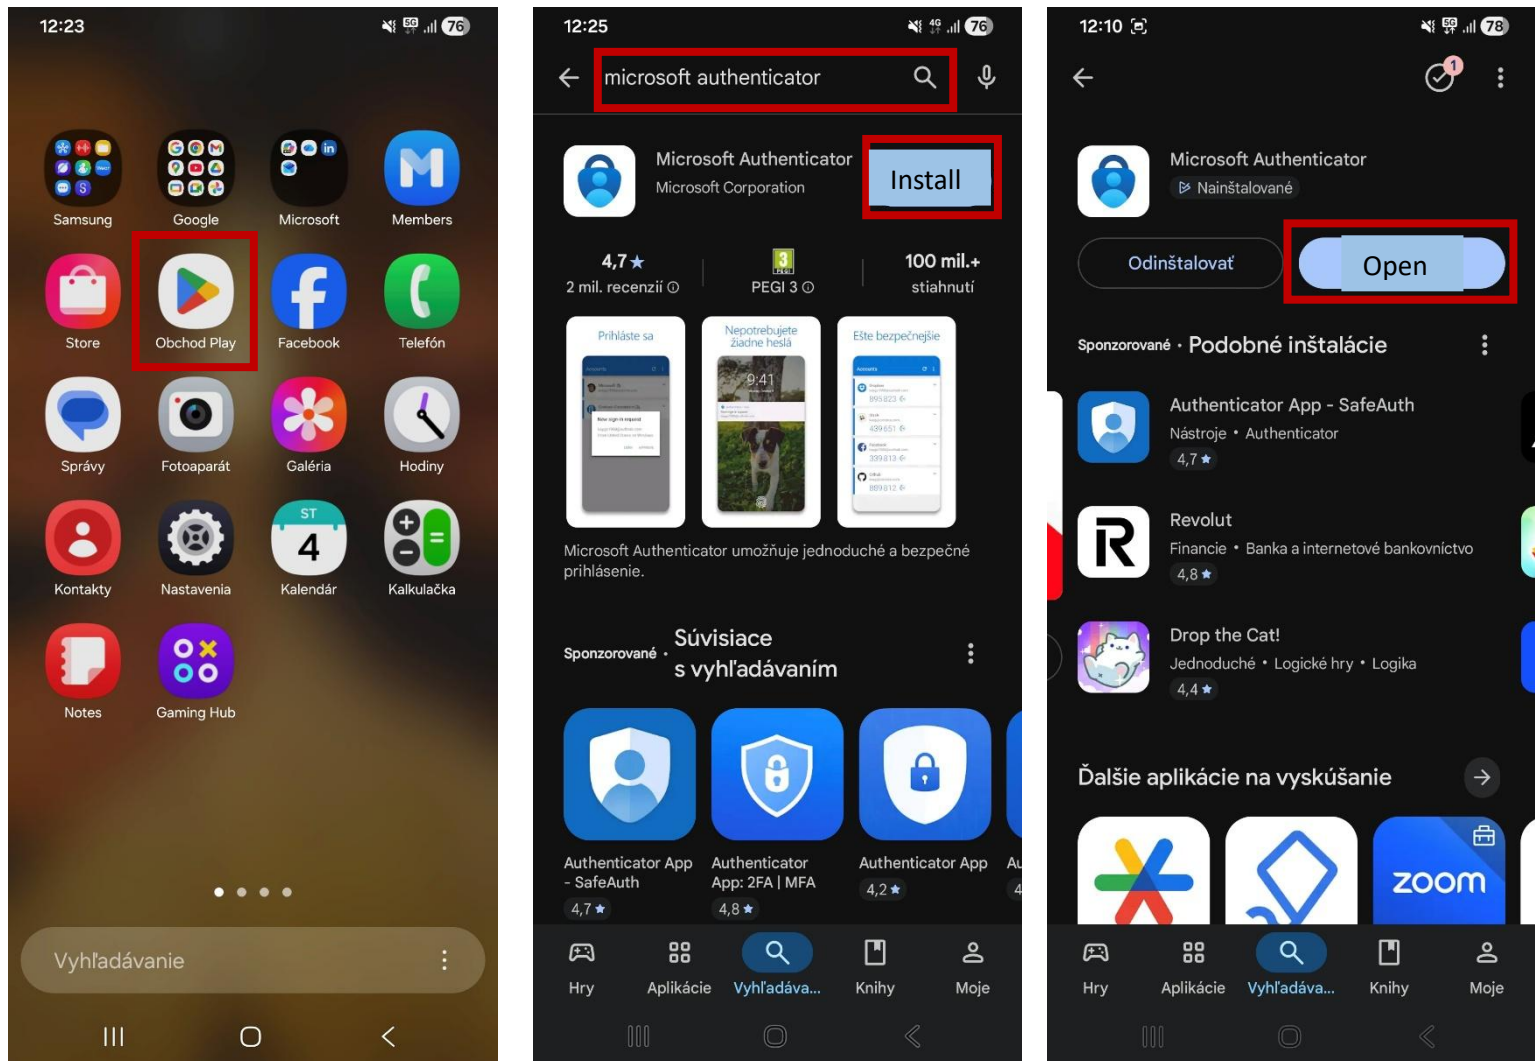

4. In the next step, select **“Add sign-in method”** and then choose **“Microsoft Authenticator”**.

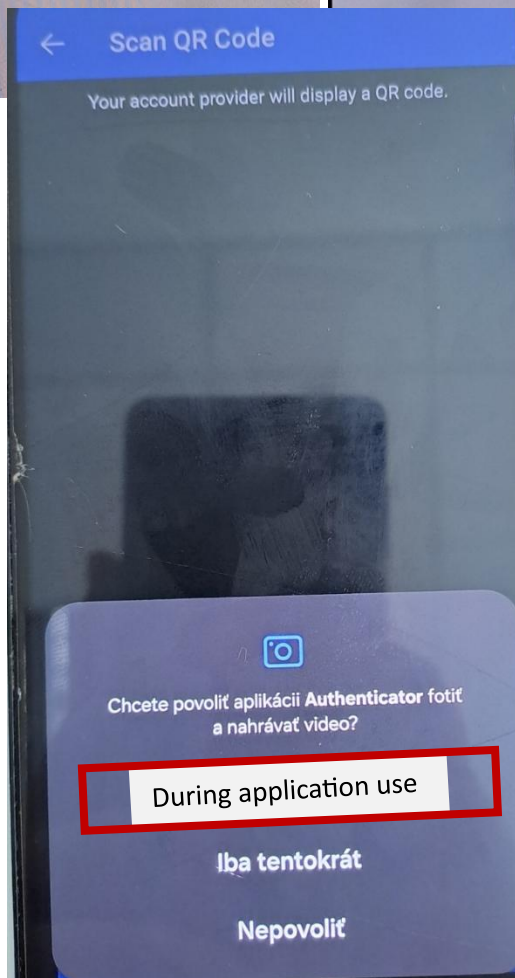

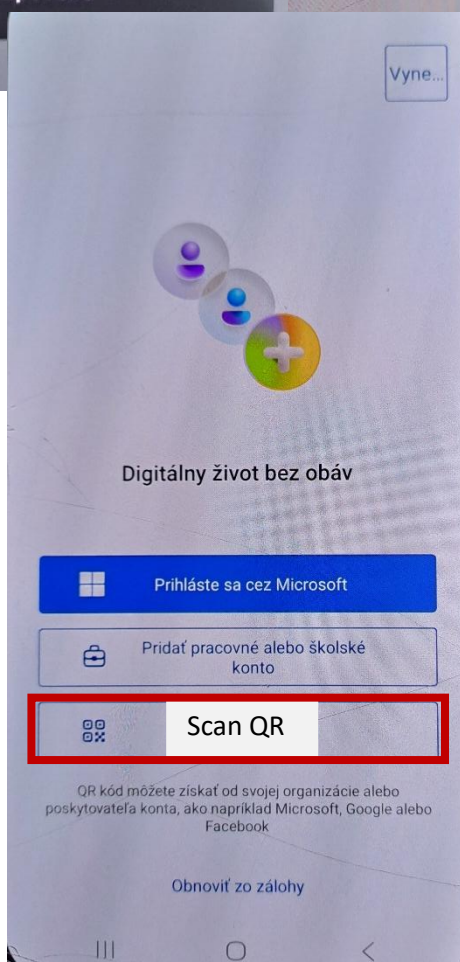

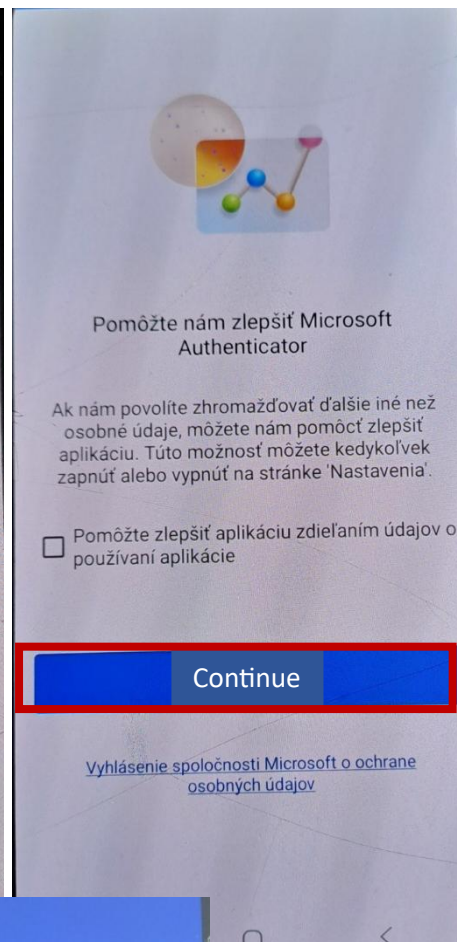

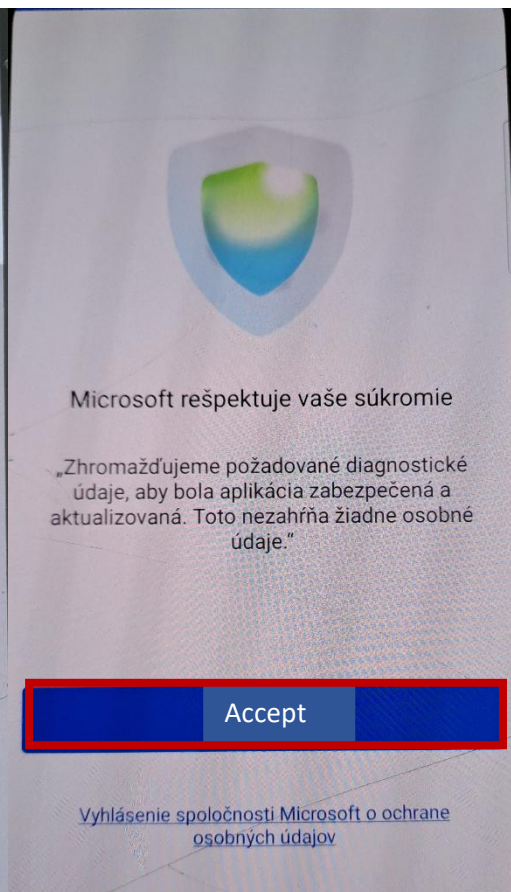

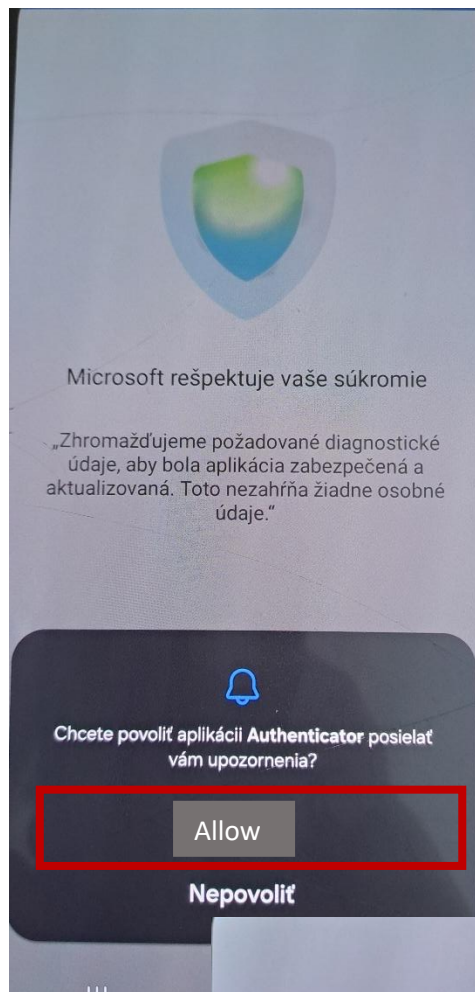

5. You will be prompted to **install the Microsoft Authenticator app on your mobile device**. Download the application depending on your device: from the **App Store** (for iOS devices), or from **Google Play** (for Android devices).

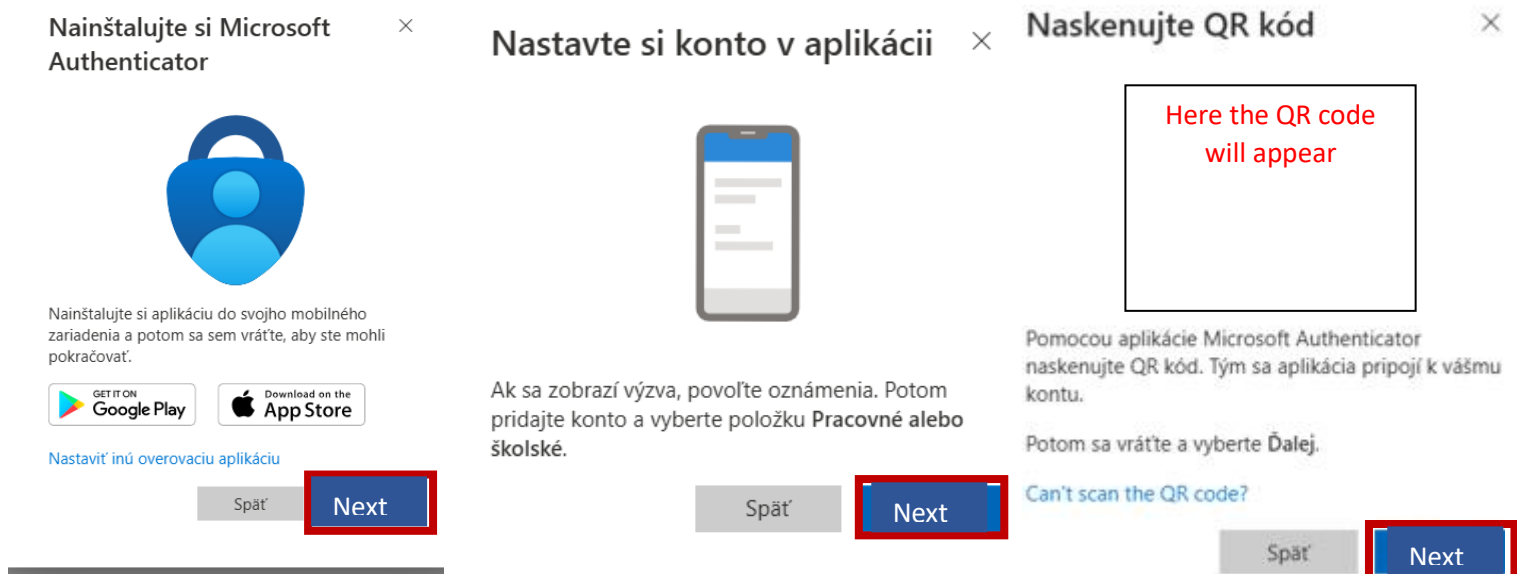

Installing Microsoft Authenticator on an Android device via Google Play

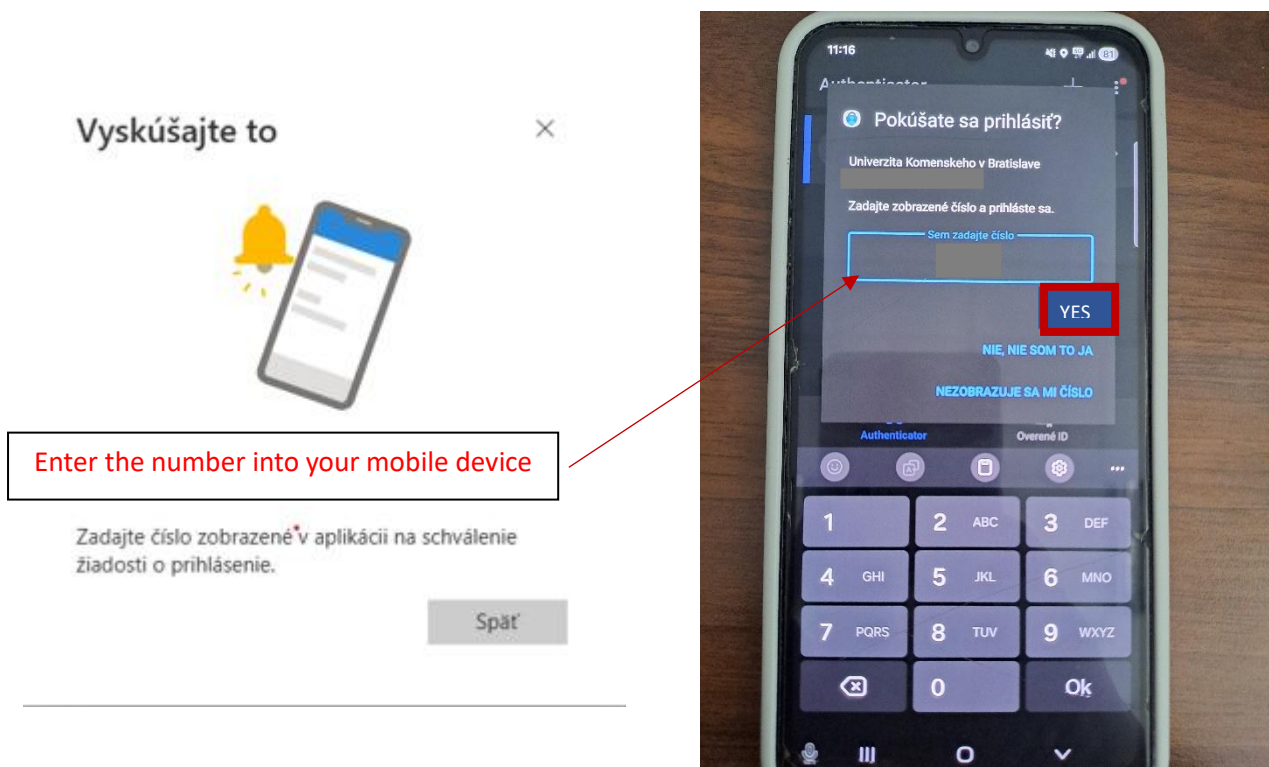

* Note: If your mobile device has a screen lock enabled, the application may ask you several times during installation or verification to enter your device's passcode.

6. After installing the application, return to your **computer** and click **"Next."** Click **"Next"** once more and a **QR code** will appear that you need to scan with the Microsoft Authenticator app:

7. Follow the instructions in the mobile application to complete the verification:

8. Setup completed

✓ Authenticator Added

Teraz môžete používať Microsoft Authenticator na schvaľovanie prihlásení, získavanie jednorazových kódov a ďalšie funkcie.

Toto je teraz vaša predvolená metóda prihlásenia.
