

**Dear Pharmacy Students!**  
**Congratulations on your choice of**  
**profession.**

A vast and rewarding array of  
opportunities within the

**ever-evolving**  
**field of pharmacy**  
awaits you.

# Introduction to Pharmaceutical Propedeutics:

The Pharmaceutical Propedeutics  
is the module, that provides an  
introduction to:

the pharmacy art,  
the pharmacy science,  
and the pharmacy practice.

The word „Propedeutic“  
- from Greek  
propaideuein,  
to teach beforehand.

# The goals of the Pharmaceutical Propedeutics are:

- - to understand present-day pharmacy sciences, practice and opportunities,
- - to develop a sense of pride, dignity and purpose concerning pharmacy,
- - to understand pharmacy's place, the pharmacist's responsibilities to society,
- - and the roles of professional societies, ethics and law.

In this connection we speak often about

# **Deontology**.

The deontology is the theory  
or study of moral obligation.

It stems from the Greek word  
"deon", meaning duty.

In moral philosophy,  
**deontology** is

the view that morality either forbids or permits actions, which are done through moral norms. Simply put, the correctness of an action lies within itself, not in the consequences of the action.

This lies in contrast with teleology.

For example, a deontological moral theory might hold that lying is wrong, even if it produces good consequences.

Historically, the most influential deontological theory of morality was developed by the German philosopher Immanuel Kant, who introduced the idea of the categorical imperative.

Summarized with other words:

The module

Pharmaceutical Propedeutics

introduces the concepts required  
to understand the essential pharmacy  
disciplines.

# Pharmaceutical Propedeutics as a Module in first Study Year.

The course covers the general principles of pharmaceutical sciences and practice, continues with a general survey of specific characterization by covering the basic structures and mechanisms of **the role of drugs in the pharmacy sciences and practice.**

**STUDY CODE**

**COMENIUS UNIVERSITY IN BRATISLAVA  
FACULTY OF PHARMACY**

JAMASOFT2014-2015

This Study Code shall govern  
the study of the FaF UK  
students  
admitted to study programmes  
accredited in pursuance with  
the Act on Higher Education  
Institutions.

# The study codes of Faculties

valid to date of commencement of study shall apply to the students admitted to the respective fields of study established under preceding regulations and to the students admitted to doctoral studies in scientific fields established under preceding regulations.

(1) Study at the Faculty is  
conducted in accordance  
with law.

## (2) All academic rights and freedoms shall be guaranteed at the Faculty.

In connection with study,

- academic rights and freedoms shall be deemed, in particular, the students' right to learn at the
- preserved free choice of study within the framework of accredited study programmes and
- freedom of education consisting particularly in the openness to various scientific views,
- research methods and artistic trends and the possibility of expressing own views.
