**Bratislava 2026**

## A WORD FROM THE DEAN

Dear students and esteemed colleagues,

It is my great pleasure to welcome you to the new academic year 2026/2027.

A particularly warm welcome goes to our first-year students. Dear first-year students, I wish you perseverance, enthusiasm, and determination as you embark on your studies. You have chosen to pursue a healthcare profession that offers excellent career opportunities throughout Europe and outstanding prospects for the future. You have also chosen a faculty that is actively shaping its scientific and research profile and pursuing ambitious goals – which naturally come with high expectations.

From your very first day, keep in mind that a university degree is merely a gateway to professional life in pharmacy and healthcare; it is not a guarantee of success. Success comes only through personal commitment and sustained effort – qualities that you must demonstrate throughout your time at university. Take advantage of every opportunity to distinguish yourselves, as investing in your personal and professional development is the best investment you can make in your future.

We have an intensive academic year ahead of us, one that will differ in many respects from those before it. On 1 September this year, the new Higher Education Act comes into force, bringing several significant changes. Over the past several months, we have already begun implementing many of these changes within our Faculty, while further steps still lie ahead.

This legislation marks the beginning of a new era – one that presents our Faculty with exciting opportunities. Over the past years, we have prepared responsibly for this transition. Therefore, I confidently anticipate, and sincerely wish for, a period of growth and development across all areas of our Faculty's activities. My optimism is grounded primarily in what we have accomplished in recent years.

We have completed the accreditation of our habilitation and professorial appointment procedures. The Slovak Accreditation Agency for Higher Education evaluated our four disciplines – Pharmaceutical Chemistry, Pharmacology, Pharmacognosy, and Clinical Pharmacy – and concluded that their "overall quality exceeds the minimum standard for outstanding international excellence". This achievement is further reinforced by the Slovak Centre of Scientific and Technical Information's report on the periodic evaluation of research performance. According to the report, our Faculty ranks among the university's strongest scientific fields in terms of progress, particularly in strengthening collaboration with hospital practice.

Another significant milestone this year is the Minister of Health's decision granting our Faculty the authority to provide an accredited certification programme for pharmacists in the certified professional activity of adult vaccination. Without exaggeration, this marks the beginning of an entirely new era for pharmacy in Slovakia – one that will substantially expand pharmacists' professional competencies and pave the way for further developments in pharmaceutical practice.

We have also launched a new national competition for secondary school students called

Farmastikus, aimed at bringing the profession of pharmacy closer to young people and attracting talented students to our Faculty. Together with our PharmLit initiative, which promotes education on the safe use of medicines and fosters responsible attitudes toward pharmacotherapy, this project enables both our Faculty members and graduates to return to the secondary schools – including grammar schools many of us graduated from. There, we have the opportunity to speak personally about our Faculty, our study programmes, and the profession to which we have dedicated our careers.

We continue to develop Slovakia's unique educational programme in medical devices, diagnostic technologies, and healthcare technologies. In cooperation with the Faculty of Management and the Faculty of Mathematics, Physics and Informatics of Comenius University, we have secured a national project to foster entrepreneurship and innovation among students. As a result, we are introducing a new course titled Business and Healthcare Technologies, which will provide our students with direct access to lectures delivered by successful entrepreneurs and executive leaders from leading companies in the Slovak healthcare sector.

Our Faculty is our shared academic home – an institution with a distinguished past, a dynamic present, and, above all, a promising future. I sincerely hope that our collective efforts will continue to yield achievements worthy of the Faculty's prestigious standing within the Central European academic community.

As we begin this new academic year, I wish you all good health, abundant energy, professional success, inspiring collegial relationships, and wisdom in all your decisions.

In Bratislava, 13. 7. 2026

prof. PharmDr. Ján Klimas, PhD., MPH  
Dean of the Faculty

**prof. JUDr. Marek Števček, DrSc.**  
Rector of Comenius University Bratislava

\* \* \*

The scientific research activity of the department represents integrated basic research in three areas: (i) in the field of analytical methods and control procedures important for the identification and determination of substances in biological and pharmaceutical systems from the aspects of health and environmental protection, (ii) in the field of development of new molecules as potential (radio)pharmaceuticals with an emphasis on the current requirements of (nuclear) pharmacy and (iii) in the field of nanotechnologies and innovative materials.

The focus is in the first case on the development and application of innovative methods of instrumental analysis (1D and 2D HPLC-UV/MS, 1D and 2D CE-UV/DAD/LIF/MS, RRFA, electrochemical biosensors, UV-VIS and Fluorescence spectrophotometric methods, etc.) with an orientation towards polycomponent inorganic analysis of biogenic and toxic elements, levels of drugs and their metabolites in biological matrices, profiling of endogenous substances as potential biomarkers, analysis of drugs in (new) dosage forms, and analysis of foreign substances in the environment. Innovative methodological approaches consist mainly in the creation of multidimensional separation techniques, implementation of advanced detection techniques (DAD, LIF, MS) into separations, implementation of new sensors in electrochemistry, design of advanced (especially on-line) sample preparation procedures for analysis. Applied research, carried out in cooperation with faculty and non-faculty departments (primarily clinical - Bory Hospital in Bratislava, NOÚ in Bratislava), including foreign ones (Faculty Hospital in Olomouc), is mainly focused on the field of biomedical studies (pharmacokinetics, metabolic studies, biomarker monitoring and diagnostic studies, therapy optimization, study of drug action mechanisms, etc.) and galenic pharmacy (analytical study of new drug forms in relation to the drug or biological system). An important place is occupied by the analysis of biopolymers (biological drugs, antibodies, new polymer derivatives) and the development of innovative analytical methods and procedures for the identification and quantification of such substances in biological and pharmaceutical systems. In the field of nuclear pharmacy, the department focuses on the design, preparation (synthesis) and analytical evaluation of new molecules as potential (radio)pharmaceuticals and the coordination chemistry of biologically important compounds. The synthetic protocol is supplemented by chromatographic semi-preparation to obtain high-purity products. A microwave reactor with on-line Raman spectroscopy is implemented in the synthesis and monitoring of its progress. Relevant analytical methods are used in the evaluation of new substances (TLC, UV, fluorescence spectrometry, IR, NMR, EPR (external), HPLC-MS/MS, CE-MS/MS, in a broader context also imaging methods, e.g. PET (external)) and in the evaluation and prediction of new molecules, statistical and regression methods and molecular modeling methods are used. From the point of view of biological activity, attention is paid to the study of the structure-effect relationship for a new group of substances based on triazinesulfonamide conjugates with amino acids and peptides as potential carbonic anhydrase inhibitors. For the purpose of (radio)therapy and (radio)diagnosis of hypoxic tumors, emphasis is placed on the study of the formation and evaluation of the biological activity of complexes of the aforementioned conjugates with metal cations and their radioisotopes. Comprehensive research is also supported by cooperation with faculty and non-faculty departments (Biont), including foreign ones (University of Florence). New molecules are also evaluated with respect to their antioxidant, antimicrobial, antiviral and other chemical/biological activities in cooperation with specialized domestic and foreign departments.

In the field of nanotechnology, the department is dedicated to the design and preparation of nanoparticle systems for the purposes of developing innovative materials, innovative analytical systems (modified sensors, selectors, pseudostationary phases and sorbents) and innovative dosage forms and drug carriers (in cooperation with the Department of Galenic Pharmacy, Faculty of Medicine, UK). In the study of such systems based on biodegradable polymers and their new derivatives, the methods of electron microscopy, dynamic and electrophoretic light scattering (DLS and ELS) are implemented in addition to the above-mentioned analytical techniques.

The research activity of the department is focused on comprehensive research into the preparation and study of the physical, aggregation and biological properties of nanodisperse systems as potential nanocarriers for drugs and biologically active compounds. The main research program of the department is the preparation of metal nanoparticles stabilized by bioactive molecules and the study of their physical properties, as well as the preparation and study of coordination compounds of biologically significant central atoms and ligands with various types of biological activity. Research activities are carried out mainly in the following areas:

- Preparation of inorganic nanoparticles modified with compounds with potential biological activity and nanoparticles oriented towards application in pharmaceutical technology
- Design, preparation and study of coordination compounds of biologically significant central atoms and ligands, mainly with antiphlogistic, antitumor, radioprotective and superoxide dismutase-like effects
- Study of interactions of proteins and nucleic acids with drugs and low-molecular systems by physicochemical methods
- Synthesis and research of physicochemical, aggregation and biological properties of surfactant molecules. Hydrophobic modification of amino acids, study of their aggregation properties and biological activity.
- Research in the field of substances negatively affecting humans (drugs, anti-doping and other prohibited substances)
- Use and application of multi-instrumental spectral and analytical methods (GC-MS/MS, LC-MS/MS, LC-HRMS (Orbitrap), DART, CD

The scientific research work of the department is oriented in the following directions:

- Study of enzymes, their regulatory and epigenetic mechanisms in relation to the biosynthesis of therapeutically active plant substances. Enzymes of signal transduction processes in plant cells.
- Study of the influence of lactobacilli on the influence of non-alcoholic fatty liver disease. Elucidation of the mechanisms of action on inflammation and lipid metabolism: TLR4 signaling pathway and its "downstream" molecules, anabolic and catabolic processes of lipid metabolism in the liver.
- Testing of potential antioxidant active substances using model enzymes. Study of the structure of the enzyme active site from the perspective of elucidating the mechanism of inhibition by new molecules of potentially therapeutically active substances in the inflammatory process.
- Interaction of biocidal effects of newly prepared compounds with microbial cells. Immunomodulatory and antimicrobial effects of microorganisms, natural and synthetic compounds.
- Biological and genetic characterization of potentially probiotic microorganisms. Selection of new probiotic microorganisms for use in human and/or veterinary practice. Characterization of their biochemical and molecular biological properties, study of antimicrobial activity and immunomodulatory potential.

The subject of the department's scientific research activities is the design, synthesis, and analysis of newly synthesized drugs, as well as the study of their physicochemical properties and the study of the relationships between their chemical structure and antibacterial, antimycobacterial, antifungal, antiviral, and antineoplastic (cytotoxic) activity.

The scientific research activities of the department are carried out in the following areas:

- synthesis, study of physicochemical properties and biological effects of compounds containing privileged N-arylpiperazine and/or (substituted) benzo[b]furan groups, evaluation of structure-activity, structure-(cyto)toxicity and activity-activity relationships with the implementation of adequate statistical methods including chemometric statistical analysis of principal components,
- synthesis, characterization and study of physicochemical, thermodynamic and biological properties of isatin and its derivatives as suitable candidates for new drugs,
- study of physicochemical properties of newly synthesized drugs and compounds with the ability to influence membrane transport systems, respectively. study of surfactant compounds,
- research and design of new compounds capable of inhibiting elongation and secondary nucleation of tau filaments and supporting disaggregation of tau aggregates using rational drug design methods for the therapy of neurodegenerative diseases,
- in drug analysis, which is an integral part of pharmaceutical chemistry, research is focused on quality control and in particular on the harmonization of national monographs of drugs, excipients and medicines in accordance with the conclusions of the European Pharmacopoeia Commission. The result is, in close cooperation with the Slovak Pharmacopoeia and its Pharmacopoeia Commission, the development of analytical procedures – physical, physicochemical and chemical – and their validation as the basis for monographs in the Slovak Pharmaceutical Codex.
- within drug analysis, the department also focuses on the development of high-performance separation methods, especially capillary electrophoresis (CE) and liquid chromatography (LC), for the assessment of the quality of biological drugs, especially based on peptides and proteins; an example is their use in assessing the purity, related impurities, degradation products, and structural modifications of peptide and protein drugs.

The Department of Pharmacology and Toxicology focuses its scientific research on the analysis of the effects of substances that primarily affect the cardiovascular system. The scientific research teams of the department analyze:

- molecular pharmacology of the cardiovascular, renovascular and endocrine systems
- investigation of new forms of cell death in the cardiovascular system
- investigation of the roles of the neuronal and non-neuronal cholinergic system, with emphasis on cholinesterases in diseases of the cardiovascular system
- pharmacological properties of known and newly synthesized drugs on the function of the heart, blood vessels, kidneys, influence of gene expression in various experimental animal models of cardiovascular diseases including hypertension, ischemic-reperfusion injury of the myocardium, atherosclerosis and heart failure, pulmonary arterial hypertension
- pharmacotherapy of risk groups of patients, especially children and seniors, with regard to the efficacy and safety of drugs,
- issues of treatment of rare diseases
- identification and solution of pharmacotherapeutic problems in clinical practice
- issues of genetics and pharmacogenomics, the influence of gene polymorphisms on the pathogenesis of diseases, as well as on the efficacy and safety of pharmacotherapy

The department provides teaching within the compulsory subjects: Social pharmacy and pharmacoeconomics, Pharmacy, legislation and ethics and Public health and pharmaceutical care; compulsory optional subjects: Pharmaceutical propaedeutics, Computer technology, Basics of management in pharmacy, Evaluation of health technologies, Pharmaceutical informatics, Basics of dietology and nutrition, Medical psychology, History of pharmacy, Basics of law for pharmacists, Hospital pharmacy; and guarantees and ensures a mandatory six-month pharmacy practice and organizes other professional practices in pharmaceutical facilities. The Department of Pharmacy Organization and Management is a responsible pedagogical unit that organizationally and professionally ensures and coordinates accredited specialized studies in the specialized field of pharmacy at FaF UK for the profession of pharmacist. The scientific research activity of the department focuses on the following issues:

- a) pharmacoeconomics, pharmacoepidemiology and pharmacy management,
- b) comparison of the issue of the position of pharmacy and healthcare with EU countries,
- c) the relationship between drug consumption and the health status of the population,
- d) pharmaceutical historiography,
- e) implementation of information systems in pharmacy,
- f) the position of pharmacy in the health sector.

The department's research focuses on medicinal products of biogenic origin:

The department of pharmacognosy in research is based on natural raw materials (plant drugs, fresh plants, plant and animal products), isolates their biologically active substances, determines their structure, biochemical and physico-chemical properties, deals with the laws of their formation and significance in the context of living nature. He studies mutual interactions of secondary metabolites, and related modifications of their biological properties in vitro and in vivo. Furthermore, it deals with the anatomical-morphological evaluation of drugs, important in practice.

The department of botany and pharmacoergasy focuses on botanical research of medicinal, aromatic and spice plants, as well as mushrooms with medicinal effects. It also deals with the macro- and microscopic structure of various plant organs, floristic research and the expansion of pharmaceutically important taxa of the Slovak flora. It studies the impact of agroecological conditions on the production of plant raw materials for the pharmaceutical industry, as well as the interactions between pharmacoergy and quantitative-qualitative properties of plant drugs.

In scientific research, the department studies the physicochemical properties of drugs and model substances using experimental and theoretical computational methods, with an emphasis on:

- elucidation of the molecular mechanism of action of drugs (antivirals, sterols, peptides and proteins) when interacting with lipid bilayers of similar composition as in cell membranes and pulmonary surfactant;
- interaction of DNA with supramolecular phospholipid aggregates in terms of their use as transfer vectors of genetic material;
- formation of molecular associates, micellization and partition equilibria of drugs in terms of elucidation of the effect of drugs and possibilities of preparation of suitable dosage forms;
- combinatorial chemistry as a method for rational drug design and molecular modeling for studying receptor-drug interactions;
- theoretical and experimental research focused on peptidomimetic molecules with antiviral properties that have the ability to inhibit viral proteases of the SARS-CoV-2 coronavirus.

The scientific and research activities of the department focus on the study of the conditions under which drugs and pharmaceutical excipients can be technologically processed into drugs in given dosage forms that meet the laws of pharmaceutical technology. The research is comprehensive, from pre-formulation studies through the design of drug formulations to the assessment of their quality and stability. Applied research covers industrial pharmacy as well as individually prepared drugs.

The mainstay of the research work of the Department of Mass-produced Drugs (HVL) is currently pharmaceutical nanotechnology. Nanoparticles are being investigated as drug carriers, especially matrix-type ones based on polymers or lipids, such as liposomal systems. The application of research in this area is oriented towards improving the bioavailability of drugs, targeted delivery of drugs to the site of action, or improving the solubility of poorly soluble drugs. Nanocarrier systems are also used in the field of incorporating biologically active substances from the cannabinoid group (e.g. cannabidiol) into modern formulations for topical use. At the same time, modern trends affecting biological drugs are being developed. Research is oriented towards the preparation and testing of formulations of monoclonal antibodies and therapeutic peptides suitable for their inhalation administration via nebulizers. At the same time, the department focuses on the use of modern separation analytical methods for the needs of quality

control and characterization of biological drugs (monoclonal antibodies, oligonucleotides, therapeutic peptides). Emphasis is placed on the methods of high-performance liquid chromatography and capillary electrophoresis. The department also focuses on the development of analytical methods for the needs of quality control of drugs and medicines with their use in a regulated environment and routine laboratory practice. Modern analytical approaches are also implemented in the field of evaluating the pharmacokinetics of drugs in biological matrices (e.g. blood, urine, plasma), while the given approaches are realistically applicable in the clinical practice environment (e.g. therapeutic drug monitoring). The relevant department also specializes in the study and characterization of high-molecular protein carriers of haptens used in the therapy of oncological or neuroimmunological diseases. The department has active cooperation with the Institute of Neuroimmunology of the Slovak Academy of Sciences in Bratislava and the Biomedical Center of the Slovak Academy of Sciences in Bratislava.

One of the current research topics in the field of targeted drug delivery is overcoming the blood-brain barrier (BBB) through functionalized liposomal carriers. The BBB is a highly selective semipermeable membrane formed by endothelial cells of brain capillaries, which limits the passage of most therapeutic molecules into the central nervous system. Our research focuses on the preparation, physicochemical characterization and biological testing of peptide-modified liposomes in order to optimize their encapsulation efficiency, stability and ability to selectively deliver therapeutic cargo to the brain parenchyma.

The HVL Department also focuses on the formulations of solid dosage forms and dosage forms with gradual or controlled drug release in the form of micropellets – MUPS (multi-unit pellet system).

The research of the Department of Individually Prepared Drugs is primarily focused on modern therapeutic systems and drug formulations using new excipients of higher generations.

It deals with the issue of semi-solid dosage forms (ointments, creams, gels), patches (dermal and transdermal), films (orodispersible or dermal), suppositories, microemulsions containing drugs with low solubility (terbinafine, nimodipine, curcumin). The IPL department will also focus on incorporating nanoparticle systems into individual dosage forms. As part of the research on topical formulations, synthetic and natural active ingredients (e.g. indomethacin, propolis, monolaurin, cannabidiol, plant extracts) were used. The IPL department is also engaged in the development of mucoadhesive oral lyophilisates containing antibiotics, based on semi-synthetic polymer derivatives. It is also involved in the preparation and evaluation of so-called thermosensitive gels, in combination with chitosan and cellulose derivatives. In formulation research, synthetic copolymers of ethylene oxide and propylene oxide are also investigated in relation to nanodisperse systems with the aim of preparing formulations suitable as carrier systems for poorly soluble drugs for topical application - dermal, as well as to the mucous membranes of the oral cavity. The suitability of the composition of the gels in relation to model drugs is assessed on the basis of in vitro release. Research within the IPL department also continues to perform classical or accelerated stability tests on individually prepared formulations already introduced into practice, as well as new formulations of dermal semi-solid drugs, the composition and stability of which have not yet been tested in terms of compatibility and stability.

The Department of Health Technologies is the only academic institution in Slovakia that systematically connects pharmaceutical, medical, technical and managerial aspects of health technologies with the aim of preparing experts for the dynamically developing modern healthcare sector.

Pedagogical activity: Teaching is carried out in several study fields of the Faculty of Pharmacy of Comenius University. Graduates of the 3-year bachelor's study program Medical and Diagnostic Devices can apply the acquired knowledge, skills and abilities in healthcare facilities of various types. After completing the 1st stage of higher education, the graduate can apply for a full 2-year master's study (2nd stage) in the study program Management and Health Technologies. We carry out the study in close cooperation with the Faculty of Management of Comenius University. In teaching, we emphasize the connection of theoretical knowledge with the acquisition of practical experience and skills. We use new methods and techniques, project learning, internships, workshops using digital technologies. In the Master's degree programs in Pharmacy and Pharmacy, teaching focuses on the use of medical devices in pharmaceutical care.

Research focus: The Department of Health Technologies directs its interdisciplinary research to medical devices, in vitro diagnostic medical devices, digital health, artificial intelligence and health technology management. Research activities focus on quality, safety, clinical validation, regulatory aspects and life cycle management of health technologies, with special attention paid to promising areas such as Drug Delivery Systems, biosensors, biochips, personalized medicine, Software as a Medical Device (SaMD) and intelligent diagnostic systems.

The Department of Languages provides comprehensive language instruction, which includes seminars in professional Latin, English, and German in both Slovak and English study programs. It also teaches Slovak to foreign students.

Pedagogical activity in Latin focuses on medical and pharmaceutical professional terminology with a minimum of grammar in Latin and Greek. Scientific research is focused on research into selected topics of classical philology. Teaching of English and German primarily focuses on professional pharmaceutical terminology and uses experience gained through cooperation with foreign educational institutions. Slovak for foreign students is focused on acquiring practical communication skills necessary for everyday study and professional application in pharmacy practice.

The Department of Languages is also a professional workplace that is accredited for professional teaching and examinations in the international UNlcert® system in two programs: English for Pharmacists and German for Pharmacists. UNlcert® is an international educational and testing program that, as the only academic language education program in Central Europe, provides professionally oriented professional language training, allows you to obtain a certificate of professional language knowledge, supports student mobility, and at the same time represents an important document of language competence for future employers.

Department of Physical Education and Sports (KTVŠ) providing pedagogical, scientific-research and organizational activities. The main focus of KTVŠ is the development of motor skills, health, overall physical fitness of students and their lifelong positive relationship to physical activity. The teaching concept is focused in the first semesters on familiarization and development of basic motor skills, skills and habits. The basic concept is also expanded in higher grades to include supporting forms of teaching - methodological videos, lectures and practical workshops, which are dedicated to the prevention and supportive non-pharmacological treatment of non-infectious diseases in the form of physical therapy. KTVŠ also ensures the representation of the faculty through the participation of students in sports competitions and provides sports activities, courses, workshops not only for students but also for employees of the Faculty.

### Physical education and sports facilities in the administration of the department

#### Dockyard

841 04 Bratislava, Botanická 11

The Dockyard is a purpose-built physical education and sports facility of the Faculty of Pharmacy focused on teaching water tourism. The teaching includes theoretical and practical preparation of students.

The Central Library of the Faculty of Arts, Charles University (hereinafter referred to as the Central Library) is a specialized academic library and provides the following services: absentee, full-time and interlibrary loan services, consultation, bibliographic-information, research, copying services and others. Users have the opportunity to use the library services in an open space furnished with modern and comfortable furniture, user PCs (8 pcs) with free access to documents, with access to a fixed computer network and wifi connection (separate computer study room with 10 PCs) and a larger number of study places (68). The library collection contains a total of 38,753 c.j. (the annual increase represents approximately 600 new monographs and textbooks, approximately 31 titles of printed journals and more than 90 titles of electronic foreign journals). The basis of the collection is monographs, textbooks, scripts, handbooks and proceedings. Part of the fund is deposited in 13 partial libraries. The Central Library archives (since 1991) and makes available the fund of final and scientific-qualification theses defended at the faculty; since 2019 only in the e-version. Users have access to information on available literature through the union online catalog of the University of Prague. In addition to databases licensed in the NISPEZ project (WoS, Scopus, Wiley, Springer, Science Direct, SciFinder, Reaxys, etc.), specialized databases and information sources are also available for the needs of students and teachers, such as: the pharmacological database UpToDate Lexidrug, the AccessPharmacy database, the European Pharmacopoeia online, scientific periodicals of the American Chemical Society, BOOKPORT, Oxford Academic, UpToDate, etc. In addition to printed books

and magazines, students have access to the full texts of more than 626,700 e-book titles and approximately 40,000 online magazine titles within the licensed electronic resources of Comenius University, NISPEZ and FaF Comenius University. All online information resources are also available to registered users in the form of remote access, which they can request from the Comenius University Academic Library at: kniznica@vili.uniba.sk.

The library makes available the online version and digitized volumes of the scientific journal European Pharmaceutical Journal (ISSN 2453-6725), formerly Acta Facultatis Pharmaceuticae Universitatis Comenianae, available via the platform: Paradigm Publishing Services De Gruyter Brill. Comenius University Library participates in building a nationwide database on the publishing activities of CREPČ 2. It provides publishing authors with consultations on publishing activities, APC fees, including the assessment of predatory activities. The Central Library provides information education for students and faculty employees in various forms. The Central Library is part of professional organizations since 2000, it is a member of the Slovak Association of Libraries/SAK and the library staff are members of the Slovak Association of Librarians/SSKK.

**The University Pharmacy** is an independently managed unit of the Faculty of Pharmacy, which provides pharmaceutical care for the public, outpatient and hospital facilities. It also participates in the undergraduate education of pharmacy students in Slovak or English and the education of students of the Secondary Medical School in Bratislava for the pharmaceutical laboratory technician degree. When dispensing medicines, dietary foods, nutritional supplements, and medical devices, it emphasizes the

dispensing optimum. The pharmacy prepares a wide range of individually prepared medicines in accordance with the requirements of the European Pharmacopoeia and the Slovak Pharmaceutical Code. The pharmacy offers blood pressure measurement, detection of ventricular fibrillation, selected biochemical parameters, and professional advice regarding a healthy lifestyle, drug interactions, and the proper use of medicines or nutritional supplements. The University Pharmacy cooperates closely with many healthcare providers, state and professional organizations. The pharmacy participates in providing the Pharmacy Emergency Service during public holidays and helps spread awareness regarding the collection of unused medicines from the population. The pharmacy demonstrates through its daily activities that the pharmacy is the most accessible healthcare facility.

**The Faculty Pharmacy** is a public pharmacy providing pharmacy care in accordance with valid legal regulations for the public, for outpatient medical facilities and workplaces of the Comenius University Bratislava. The pharmacy is a teaching workplace of the Faculty of Pharmacy of the Comenius University Bratislava for undergraduate and postgraduate teaching in the field of pharmacy and a teaching workplace of the Secondary Medical School in Bratislava for the field of pharmaceutical laboratory technician.

The pharmacy, as a clinical and teaching workplace, conducts through its employees and interns the analysis of the medication regimen at the request of the patient or attending physician. The pharmacy actively participates in educational projects of the Slovak Chamber of Pharmacy, the aim of which is to increase the awareness of the general public about drug interactions and to present the pharmacist as a first-line consultant on the issue of drug interactions and the pharmacy as a relevant source of any information about drugs. The pharmacy carries out physical and biochemical examinations all year round, which do not require further laboratory processing. The analyzed parameters are mainly: blood glucose values, total lipid spectrum, CRP, vitamin D, glycated hemoglobin, flu, liver diseases, D-dimer, ASLO, blood pressure, irregular heart rhythm, atrial fibrillation and overall cardiovascular risk.

The pharmacy develops and prepares new recipes of individually prepared medicines, in accordance with the requirements of the Ph. Eur. and the Slovak Pharmaceutical Codex.

The pharmacy provides services in the field of environmental protection in the form of spreading awareness in the field of collection of unused medicines from the population, in the field of separation of medicines and medical devices.

The pharmacy is a teaching workplace of FaF UK to provide the subject "Pharmacy, Legislation and Ethics" in the Slovak program and the subject "Retail Pharmacy, Legislation and Ethics" in the English

program. The pharmacy is a teaching workplace of the faculty to provide the subjects "Pharmacy Practice (1)" and "Pharmacy Practice (2)" for students in the Slovak program and the subjects "Practice in Community Pharmacy (1)" and "Practice in Community Pharmacy (2)" in English program. The pharmacy is a teaching workplace of the Secondary School of Health to provide the subject "Professional practice" for students studying pharmaceutical laboratory technician. The faculty pharmacy provides concentration before the specialization exam.

\* \* \*

The Medicinal Plant Garden (MPG) is a purpose-built facility of the Faculty of Pharmacy, the main purpose of which is the cultivation, collection, maintenance and dissemination of domestic and foreign medicinal and potentially medicinal plants. The gene pool of the workplace includes approximately 750 plant species. The workplace exchanges seeds and vegetables with partner workplaces through Index seminum. In addition to maintenance and cultivation activities, MPG also serves pedagogical and scientific research purposes. The cultivated plant material is primarily used for the needs of teaching pharmacognosy and botany, but also for practical teaching in the form of excursions for secondary medical schools and for students of UTV UK.

The scientific research activity of MPG consists of cooperation with domestic and foreign institutions focused on the study of pharmaceutically important biologically active substances. It provides space for the implementation of experiments for graduates, doctoral students, teaching and research workers, primarily from the departments of pharmacognosy and botany, and cellular and molecular biology of drugs. The obtained results are continuously published in professional periodicals.

### Central NMR Laboratory

832 32 Bratislava, Odbojárov 10, basement (A)

#### Employees with tertiary education

Mgr. Branislav **Horváth**, PhD. ☎ (02) 9016 9299 📧 horvath@fpharm.uniba.sk

\* \* \*

The nuclear magnetic resonance (NMR) laboratory is a purpose-built service and research facility of the faculty, whose activities are focused on:

- providing measurements of NMR spectra for the needs of the faculty departments, focusing mainly on confirming the structure and purity of newly synthesized substances, determining physicochemical properties using NMR, identifying and determining the structure of substances isolated from plant materials
- project cooperation with faculty departments and other NMR laboratories in Slovakia.

03 230

## **Toxicological and Antidoping Centre**

Odbojárov 10/A, 832 32 Bratislava

### **Director**

prof. RNDr. Peter **Mikuš**, PhD.

☎ (02) 9016 9243, 380, 388 ✉ mikus@fpharm.uniba.sk

### **Employees with secondary education**

Veronika **Horváthová**

### **Employees with tertiary education**

- employees of the faculty departments according to the type of TAC laboratory participating in TAC projects (more information on the website [www.fpharm.uniba.sk](http://www.fpharm.uniba.sk)).

\* \* \*

The toxicological and anti-doping center is a purpose-built research and development workplace of the faculty, whose activities are focused on:

- development of advanced analytical methods (1D and 2D (U)HPLC-DAD/MS/MS, 1D and 2D CE-DAD/LIF/MS/MS) and sample treatment procedures (on-line CE, SPE and LC techniques) for toxicological, anti-doping, pharmaceutical and clinical analysis
- research in the field of isolation, identification and determination of toxic substances, drugs and their metabolites in matrices of biological origin,
- analyzes of samples of biological origin for diagnostic purposes and screening as part of doping control,
- analyzes of samples of pharmaceutical and biological origin for the purposes of pharmaceutical and biomedical studies (metabolomic and proteomic analyses of clinical samples for therapeutic drug monitoring, pharmacokinetic studies, therapy optimization and diagnostics; targeted/untargeted analyses of pharmaceutical reaction mixtures for identification of the chemical structure of new molecules, profiling and determination of the purity of synthetic products as potential drugs and drug carriers),
- analyzes of samples of biological and other origin for the purposes of criminological and forensic studies
- project cooperation with faculty departments and non-faculty workplaces (Anti-Doping Agency, Police Academy, Hospital Bory in Bratislava, Faculty hospital in Olomouc and others) in the field of research with a similar focus.

\* \* \*

The Slovak Association of Pharmacy Students (SSŠF) is an independently functioning organization of students of the Faculty of Pharmacy of the University of Charles University. Its primary goal is to provide space for growth for future pharmacists who want to get the most out of their studies. Its largest project is the annual Pharmacists' Career Days - the largest pharmaceutical job fair in Slovakia combined with a professional symposium. In addition, it covers a wide range of activities - it covers educational projects focused on areas beyond the curriculum (Clinical Skills Event, Kvapka plná informácií, Chcem viac, Lekárske paragrafy...), takes care of cultural life at the faculty (Pharmacists' Ball, Pharmacists' Tablet, Farmakvíz...), opens doors to the whole world for our students through the Student Exchange Programme (SEP) and congresses of the international student associations EPSA and IPSF. The SSŠF workshop also provides space for publishing activities - the Association regularly publishes its own magazine Farmakoviny, handbooks for freshmen and graduates, and also contributes to external periodicals. Also worth mentioning is the rich cooperation with the Department of Physical Education and Sports and the events that are created as part of this cooperation - autumn and spring Teambuilding at Lodenica, futsal and volleyball tournaments, the Week of the Fight against Obesity... In the friendly atmosphere of the SSŠF, every student is welcome without distinction, and the Association is very happy to provide each of them with what they need - unforgettable experiences and new knowledge, but also space for the implementation of their own projects and self-development.

\* \* \*

In accordance with the publishing authorization, the main task of the CU Polygraphic Center is the printing of university publications based on the approved publishing plan of the university. The center may, within its capacity, also provide printing of:

- a) some scientific works in collections or monographs included in the publishing plan of the university,
- b) author's reports, and possibly also methodological and other auxiliary materials for the needs of individual parts of the university.

**Notes:**

**o/o/o** number of education hours per week, in the form: lectures / seminars / laboratory practicals

**S** course is concluded by an exam

<sup>A</sup> For students in 4. and higher year of study: course *Mathematics for Pharmacists* is an obligatory-elective course

<sup>B</sup> For students in 4. and higher year of study: course *Genetics and Pharmacogenomics* is an obligatory-elective course

<sup>C</sup> For students in 4. and higher year of study: course *Biopharmaceutical Technology* is an obligatory-elective course

<sup>D</sup> For students in 6. and higher year of study: course *Biotechnology* can be considered completed, if student has completed the course *Technology of Biological Drugs*

<sup>E</sup> For students in 2. and lower year of study

**OBLIGATORY-ELECTIVE COURSES**

**Notes:** o/o/o number of education hours per week, in the form: lectures / seminars / laboratory practicals  
S course is concluded by an exam

## IMPORTANT INFORMATION FOR STUDY:

- Some obligatory elective courses may require prerequisites which are recommended or required to be passed before the enrolment to the subject (the information on prerequisites can be found on the web page of the faculty or in the course's information sheet in the AIS).
- The attendance at all forms of education that the student has registered for is obligatory (i.e. lectures / seminars / laboratory practicals).
- To complete the Master study it is necessary to obtain **at least 300 credits**.

## Prior to State Examination in *Pharmacognosy, Pharmaceutical Chemistry, Pharmacology*

it is necessary to pass the following courses:

- |                                                    |                                 |                                             |
|----------------------------------------------------|---------------------------------|---------------------------------------------|
| * Analytical Chemistry (1)                         | * Pharmaceutical Chemistry (1)  | * Clinical Pharmacy and Pharmacotherapy     |
| * Analytical Chemistry (2)                         | * Pharmaceutical Chemistry (2)  | * Clinical Pharmacology and Pharmacotherapy |
| * Analytical monitoring of drug levels in practice | * Pharmacognosy (1)             | * Microbiology                              |
| * Drug Analysis                                    | * Pharmacognosy (2)             | * Organic Chemistry (1)                     |
| * Anatomy and Physiology                           | * Pharmacology (1)              | * Organic Chemistry (2)                     |
| * Biochemistry                                     | * Pharmacology (2)              | * Pathology                                 |
| * Biotechnology                                    | * Physical Chemistry            | * Toxicology                                |
| * Pharmaceutical Botany                            | * Genetics and Pharmacogenomics | * General and Inorganic Chemistry           |
| * Pharmaceutical Physics                           | * Immunology                    | * General Biology                           |

## Prior to State examination in *Pharmaceutical Technology, Social Pharmacy and Retail Pharmacy*

it is necessary to pass the following courses:

- |                                 |                                           |
|---------------------------------|-------------------------------------------|
| * Biopharmaceutical Technology  | * Practice in Community Pharmacy (1)      |
| * Pharmaceutical Physics        | * Practice in Community Pharmacy (2)      |
| * Pharmaceutical Technology (1) | * Retail Pharmacy, Legislation and Ethics |
| * Pharmaceutical Technology (2) | * Social Pharmacy and Pharmacoeconomics   |
| * Physical Chemistry            | * Public Health and Pharmaceutical Care   |

## Prior to State examination in *Graduation Thesis Defence*

- |                                |                                 |                                  |
|--------------------------------|---------------------------------|----------------------------------|
| * Diploma Thesis Preparation I | * Diploma Thesis Preparation II | * Diploma Thesis Preparation III |
|--------------------------------|---------------------------------|----------------------------------|

and the electronic version of his/her final thesis must be uploaded into the AIS2 system within the scheduled time.

## DOCTORAL (PHD.) STUDIES

Doctoral studies are the highest level of higher education. The Faculty of Pharmacy of the Comenius University Bratislava provides doctoral studies in registered fields of study according to accredited study programs. Doctoral studies are carried out in full-time or part-time form. A scholarship is provided to full-time doctoral students. Doctoral studies are subject to provisions pursuant to Act Nr. 131/2002 Coll. on universities and on the amendment and addition of certain laws as amended (hereinafter referred to as "the law on universities") and the study regulations of the university and of the faculty.

The basic condition for admission to doctoral studies is the previous completion of the 2nd degree study program, i.e. j. obtaining a higher education in a master's (or engineering or doctoral) study according to the requirements of individual accredited study programs.

At least two months before the deadline for submitting applications for doctoral studies, the dean will list the topics of dissertations that can be applied for as part of the admissions process. Dissertation topics, together with the mentioned requirements, are published on the official bulletin board and in a mass manner according to a special regulation. Applicants are admitted to doctoral studies on the basis of an application through the admission procedure. Only one applicant can be accepted per topic. An accepted applicant becomes a doctoral student on the day of enrolment, the date of which is determined by the dean.

Doctoral studies are carried out for credit according to an individual study plan drawn up by the supervisor and approved by the departmental committee. The individual study program of a doctoral student consists of a study part that ends with a dissertation exam, a scientific part and a defense of the dissertation. The doctoral student's individual study plan contains a list of subjects to be taken by the doctoral student, a list of dissertation exam subjects selected from the list given in the study program description, and a list of mandatory and recommended literature to be studied by the doctoral student as part of his/her individual preparation for the dissertation exam. The doctoral student's individual study program also includes dates in which the doctoral student must complete individual subjects and the dissertation exam. In accordance with § 54 par. 11 of the law on universities, carrying out teaching activities in the scope of no more than four hours per week on average for the academic year in which teaching takes place. In the external form of doctoral studies, the pedagogical activity can be replaced by another professional activity that is related to the pedagogical work. Full-time doctoral studies at the faculty last a maximum of four academic years. In the external form, doctoral studies last a maximum of five academic years.

A doctoral student in the full-time form of doctoral studies registers for the subject of the state examination – the dissertation examination no later than 18 months (in a 4-year full-time study) from the start of the study, a doctoral student in the external form no later than 24 months (in a 5-year external study) from the start of the study. The doctoral student is obliged to submit, together with the application form for the dissertation examination, a written work prepared for the dissertation examination. The dissertation examination is held before an examination committee, which has at least four members.

The defense of the dissertation is public and takes place in the form of a scientific debate between the doctoral student, opponents, members of the examination committee for the defense and other participants in the defense.

The diploma awarding the academic title "doctor" ("philosophiae doctor", abbreviated "PhD.") is issued by the university.

The relevant provisions of the law on universities and the Statute of the Comenius University Bratislava and the university's internal regulations apply to the fees associated with doctoral studies and the issuance of a diploma.

At the Comenius University Bratislava, Faculty of Pharmacy, doctoral studies are carried out in the following accredited study programs:

### **Accredited doctoral study programs at Faculty of Pharmacy**

**Full-time form of study: four-year study** in study programs, in Slovak and English:

- **Pharmacology** in the study field of pharmacy
- **Pharmaceutical chemistry** in the study field of pharmacy
- **Pharmaceutical technology** in the study field of pharmacy
- **Pharmacognosy** in the study field of pharmacy
- **Clinical pharmacy** in the study field of pharmacy

**Part-time form of study: five-year study** in study programs, in Slovak and English:

- **Pharmacology** in the study field of pharmacy
- **Pharmaceutical chemistry** in the study field of pharmacy
- **Pharmaceutical technology** in the study field of pharmacy
- **Pharmacognosy** in the study field of pharmacy
- **Clinical pharmacy** in the study field of pharmacy

### **Characteristics of the study program *Pharmacology* of the doctoral degree in the study field pharmacy**

The main subject of the dissertation exam: Pharmacology

Other subjects of the dissertation exam: Physiology, Molecular biology, Pathological physiology, Biochemistry, Toxicology, Immunology, Clinical pharmacology and pharmacotherapy, Pharmaceutical technology, Technology of Biological Drugs.

### **Characteristics of the study program *Pharmaceutical chemistry* of the doctoral level of study in the study field pharmacy**

The main subject of the dissertation exam: Pharmaceutical chemistry

Other subjects of the dissertation exam: Inorganic chemistry, Organic chemistry, Analytical chemistry, Physical chemistry, Biochemistry, Pharmacology, Pharmaceutical technology, Analytical monitoring of drug levels in practice.

### **Characteristics of the study program *Pharmaceutical technology* of the doctoral level of study in the study field pharmacy**

The main subject of the dissertation exam: Pharmaceutical technology

Other subjects of the dissertation exam: Analytical monitoring of drug levels in practice, Bioanalytical chemistry, Biophysics, Pharmacology, Physical chemistry of drug forms, Technology of biological drugs, Technology of nanoparticles.

### **Characteristics of the study program *Pharmacognosy* of the doctoral degree study in the study field pharmacy**

The main subject of the dissertation exam: Pharmacognosy

Other subjects of the dissertation exam: Pharmaceutical botany, Biochemistry, Analytical chemistry, Pharmacology, Clinical pharmacy, Plant molecular biology, Pharmaceutical chemistry, Current Trends in Preparations of Natural Origin.

### **Characteristics of the study program *Clinical pharmacy* for the doctoral degree in the study field pharmacy**

The main subject of the dissertation exam: Clinical pharmacy

Other subjects of the dissertation exam: Pathological physiology, Immunology, Applied biochemistry, Toxicology, Pharmacology, Clinical pharmacology and pharmacotherapy, Pharmacy-social pharmacy, Analytical monitoring of drug levels in practice.

## **RIGOROUS PROCEDURE**

Rigorous examinations and defenses of rigorous theses (hereinafter referred to as "rigorous procedure") are conducted at the Comenius University Bratislava, Faculty of Pharmacy in accordance with §53 par. 9 and 10, §62a, and §63 of Act No. 131/2002 Coll. on universities and on amendments to certain laws as amended (hereinafter referred to as "the law on universities"), as well as in accordance with Internal regulation no. 22/2018 Directive of the rector of the CU "Principles of rigorous procedure at Comenius University" and directive of the dean of FPharm CU 1/2019 "Principles of rigorous procedure at Comenius University in Bratislava, Faculty of Pharmacy".

Only a graduate of the pharmacy study program - a graduate of higher education who has obtained a master's degree (hereinafter referred to as the "applicant") can apply for the rigorous examination, which includes the defense of a rigorous thesis, in the field of pharmacy.

Under the same conditions, a graduate of pharmaceutical studies from a foreign university can apply for the rigorous exam, which also includes the defense of a rigorous thesis, provided that his educational certificate issued by the foreign university is equivalent to the educational certificate issued by the Comenius University Bratislava .

Applicants for the rigorous procedure apply in writing, stating the main subject for which they are applying. The documents listed on the application form are attached to the application. The Dean of FaF UK decides on the acceptance of the applicant. After being accepted for the rigorous procedure, the applicant is obliged to pay the amount of €550 (costs associated with the rigorous procedure) in the prescribed manner. The rector is entitled, on the proposal of the dean, to reduce or waive the payment of the fee for actions connected with rigorous procedure in accordance with the statute and internal regulations of the CU only for an applicant who works in the main employment relationship at the faculty or a doctoral student in the full-time form of doctoral studies. For the repetition of a rigorous examination or the defense of a rigorous thesis, the faculty may require the payment of an amount equal to 60% of the amount that the applicant paid for the regular examination date (in the academic year 2026/27: €150).

Rigorous work must be original. It cannot be the same as a diploma thesis or other qualification work and it cannot have only a compilation character. It must contain knowledge suitable for publication in the professional press. After completing the rigorous work, the participant will submit it to the chairman of the examination committee in three copies, and at the same time in electronic form using AIS. The chairman of the committee forwards it to the opponent and the trainer and, based on their opinions, decides on the admission of the participant to the rigorous examination. The rigorous exam is held in oral form on a specified and published date.

The rigorous examination is conducted before the examination committee in the presence of the chairman of the examination committee and at least three other members, while at least two members of the examination committee are university teachers working as professors or associate professors. The commission has a quorum if its chairman and at least two other members are present. The rigorous examination begins with the defense of a rigorous thesis and immediately continues with an examination of at least two study subjects of a broader basis (one of them is the main subject). The course of the rigorous examination and the announcement of its results is public.

The committee votes publicly on the result of the rigorous examination in a closed part of its session on the day of the rigorous examination and decides by a simple majority of the votes of the members present and entitled to vote. In the case of equality of votes, the opinion of the chairman of the examination committee is decisive. The chairman of the examination committee publicly announces the result of the rigorous examination on the same day with a "passed" or "failed" rating. The rigorous examination and the defense of the rigorous work can be repeated only once.

The CU may request a fee for actions related to the issuance of a diploma awarding an academic degree to graduates of master's studies who have completed a rigorous

examination. The amount of the fee is determined in accordance with the provisions of the law on universities and by the rector's directive on the amount of tuition and fees associated with studying at the CU for the relevant academic year.

The Comenius University Bratislava will issue a diploma indicating the field of study and the academic title "Doctor of Pharmacy" (abbreviated as "PharmDr.") to participants who have completed a rigorous examination and have submitted a confirmation of payment of the fee for actions related to the issuance of a diploma on the awarding of an academic title within the specified deadline.
